

Please reject the NAB's petition 04-160 that seeks to stop XM and other satellite radio providers from offering traffic and weather information. I spend several hours in my car every day travelling throughout New England and rely on my XM radio service to provide up to date traffic and weather information. No commercial broadcaster is able to offer me this type of service. Competition is healthy for all.
Please reject the NAB's petition 04-160.
